

Homelessness in Louisiana & Mississippi | 2007-2024

Behind every number is a person, family, and a story.

How has homelessness changed across Louisiana and Mississippi, who is most affected, and are housing resources keeping pace with the need?

Key Findings

- Homelessness remains elevated across both states
- Unsheltered homelessness continues to outpace sheltered resources
- Regional differences highlight uneven access to housing and services.
- Chronic homelessness remains a critical challenge.
- Resources are not keeping pace with the need.
- Targeted investment is essential to drive measurable change.

Demographics in Louisiana & Mississippi | 2007-2024

Behind every number is a person, family, and a story

Who is experiencing Homelessness, where can they find the help they need?

Demographics in Louisiana & Mississippi

Key Findings

- Men consistently represented the largest share of the homelessness population across the study period.
- Youth and veteran homelessness followed distinct trends, highlighting the need for targeted services.
- Demographic patterns varied by Continuum of Care, suggesting that regional strategies should be tailored rather than uniform.
- Understanding who experiences homelessness is essential for directing housing resources where they can have the greatest impact.

Housing Resources in Louisiana & Mississippi | 2007–2024

Behind every number is a person, family, and a story

Card values: latest selected year (2024); trends: 2007–2024.

How has housing capacity changed over time, and which Continuum of Care regions face the greatest housing resource pressures?

Key Findings

- Housing Capacity has expanded over time, but growth differs across Continuum of Care Regions.
- Emergency shelter, transitional housing, rapid rehousing, and permanent supportive housing serve different operational needs.
- Some regions show greater resource capacity than others.
- Geographic variation highlights where additional investment may be needed.

What public health conditions are important to understand alongside homelessness?

Key Findings

Health and housing are deeply connected. Chronic Disease, behavioral health, and substance use significantly impact housing stability.

Regional Differences matter. Community health burdens vary across regions, highlighting the need for localized solutions and resource allocation.

Trends inform action. Tracking changes over time helps identify progress, emerging challenges, and priorities for intervention

Better data. Better outcomes. Integrated data supports stronger partnerships and improved outcomes for individuals and communities.

Why state-level health data? County-level health sources were evaluated, but consistent annual coverage was not available across the full 2007–2024 study period. State-level analysis was used to preserve longitudinal comparability. Local geographic context is presented on the Resources page.

Analytical Workflow

- **Source Acquisition**
HUD, CDC, Census, and state public health datasets

- **Scope & Harmonization**
Louisiana and Mississippi CoCs aligned across 2007-2024

- **Data Preparation**
Standardized fields, data types, geography, and missing values

- **Data Modeling**
Power Query transformations, relationships, and DAX measures

- **Statistical Analysis**
Trend analysis and Pearson correlations using Python and SQL

- **Quality Assurance**
Totals reconciled, filter behavior tested, and results documented

Interpretation Notes

- Multi-year homelessness cards sum annual PIT snapshots; totals do not represent distinct people.
- Measure availability varies by year; visuals include only the years reported for each measure.
- CoC-level geography is used because county-level coverage was incomplete.
- Pearson correlation describes association and does not establish causation.

Project Overview

Analyze homelessness trends in Louisiana and Mississippi from 2007 to 2024 and evaluate how housing capacity, public health indicators, overdose trends, naloxone availability, and community resources may relate to changes in homelessness.

Key Findings:

1. Homelessness trends differed substantially by region, highlighting the need for localized housing, health, and support service strategies.
2. Unsheltered homelessness remained a significant challenge across several Louisiana and Mississippi regions throughout the study period.
3. Housing capacity generally increased over time; however, availability and distribution varied considerably by region.
4. Public health indicators revealed ongoing concerns related to chronic disease, mental health, and substance use across Louisiana and Mississippi.
5. Opioid dispensing, naloxone availability, and overdose mortality trends highlight continuing public health challenges across both states.
6. Resources and support service availability differed between regions, indicating potential gaps in housing, recovery, and community support services.

Conclusion:

Homelessness is influenced by a combination of housing availability, public health conditions, substance use trends, economic factors, and access to support services. By examining these factors together, this analysis provides a broader understanding of homelessness across Louisiana and Mississippi from **2007–2024**. The findings highlight opportunities for targeted interventions, expanded resources, and continued collaboration between housing, healthcare, and community organizations.

Health indicator coverage varies by source and is primarily available from 2011–2024. Demographic reporting expands over time: under-18 and veteran measures begin in 2011, ages 18–24 and over 24 in 2013, and men and women in 2014. Source data also includes additional gender and race/ethnicity categories beyond the dashboard's summary cards; availability varies by year and measure.
